Introduction

The digitalization has today a big role in all business. But it's difficult to extract the useful information from the huge data (raw data) by traditional methods. Therefore, the data science and data analysis have becoming the first main step to establish any business.

Business Problem

Finding of the best area to opening a new Mediterranean restaurant in Toronto.

One of common business is opening a restaurant that offers a typical food for citizens and immigrants in any country.

The idea in this project is to find a statistic for distribution the restaurants in regions Toronto in order to determine an optimal location for this restaurant.
